

Faculti Summary

<https://faculti.net/international-context-and-the-specific-value-of-eu-us-collaboration/>

This video video discusses the collaborative efforts between the EU and the US in the field of Information and Communication Technology (ICT), emphasizing their historical ties and shared values. It outlines the need for collaboration due to emerging global challenges, particularly in rapidly developing technologies such as 5G, the Internet of Things, and cybersecurity.

The efforts included creating policy briefs, conducting studies to assess the ICT landscape, and organizing meetings between key stakeholders, which ultimately led to a book detailing common challenges and opportunities in the technological landscape of both regions.

This video video also notes that while both regions have common industrial interests, differences in regulatory approaches can lead to opportunities for learning and innovation. The project highlighted the need for coordination in addressing global issues like climate change and the impact of advanced technologies on society.

Collaboration is described as beneficial for joint policy developments, ethical frameworks, and leveraging the strengths of each region's scientific and industrial capacities. However, it also cautions about potential risks in collaborative endeavors, including the capture by vested interests and the challenges of maintaining a balanced approach to scientific research and technological development.

Finally, the document stresses the importance of navigating complexities inherent in the intersection of public and private interests and ensuring equitable cooperation, with an eye on global competition and innovation requirements.
