

Here are some articles that discuss similar themes regarding the influence of color in sports uniforms on performance, perception, and behavior:

1. **"The Psychology of Color in Sports: How Uniforms Affect Performance"** - This article explores the psychological implications of color choices in sports uniforms and how they can impact athletes' performance and mental states during competitions. It discusses several studies that reveal insights into how color can influence not just the athletes but also referees and spectators.
2. **"Color and Competition: Does Uniform Color Affect Performance?"** - A detailed examination of the effects of uniform color on competitive sports. It reviews various empirical studies highlighting cases where teams dressed in certain colors (like red) performed better and how this can be attributed to psychological associations with colors.
3. **"Aesthetic Factors in Athletic Performance: The Role of Uniform Colors"** - This article discusses how the aesthetic aspects of sports uniforms, particularly color, play a significant role in shaping perceptions of teams and players, as well as how these perceptions can feed back into athletes' performance through confidence and aggression levels.
4. **"The Effects of Color on Sports Performance: A Review of the Literature"** - A comprehensive literature review that synthesizes findings from various studies related to color perception in sports. It highlights the red superiority effect, the implications of wearing black, and the potential disadvantages of lighter colors, especially in combat sports.
5. **"Wearing Red: Does It Give You an Edge in Sports?"** - This piece specifically zooms in on the red superiority effect, discussing various cases from the Olympics and team sports, focusing on how athletes perceive their opponents and how referees might perceive those in certain colors.
6. **"Uniform Effect: An Analysis of Team Color and Performance in Professional Sports"** - An analytical piece that evaluates how different colors affect team dynamics and performance. The article also addresses perceptions of aggression related to black uniforms and provides insight into the cultural narratives surrounding color.

These articles should provide a good foundation for exploring the nuanced relationship between uniform colors and their potential psychological impacts on performance and perception in sports videos.
