

Faculti Summary

<https://faculti.net/percentage-of-he-student-qualifications-obtained-in-science-subjects-by-personal-characteristics-2018-19-to-2022-23/>

This video discusses the trends in higher education student qualifications in science subjects, focusing on various demographic factors over a five-year period. Key points include:

- A chart shows the percentage distribution of students by gender, highlighting a notable increase in female representation.
- Age trends indicate consistent participation among younger and middle-aged groups, with minimal contributions from unspecified ages.
- Students with disabilities show a steady increase in representation, reflecting improved inclusion.
- There is stability in religious diversity among major belief groups, with slight variations in less represented beliefs.
- Ethnic representation trends indicate growth in specific groups, while the overall student body shows gradual increases.

Overall, the text indicates positive trends in inclusion and diversity within higher education science qualifications.
