

Faculti Summary

<https://faculti.net/electric-power-consumption-kwh-per-capita-across-regions-2000-2015/>

The chart presented illustrates electric power consumption in kilowatt hours per capita across various regions from 2000 to 2015. North America had the highest consumption, peaking at 14,023 kilowatt hours per capita in 2005 but declining slightly to 13,253 by 2015. Europe and Central Asia maintained a high consumption level, consistently over 5,000 kilowatt hours per capita. In contrast, East Asia and the Pacific experienced significant growth, rising from 1,662 kilowatt hours in 2000 to 3,651 in 2015, reflecting rapid development. Africa saw an increase from 113 kilowatt hours in 2000 to 178 in 2015, although it remained among the lowest globally. Eastern and Southern Africa showed a decline from 764 kilowatt hours in 2000 to 671 in 2015, indicating regional disparities. Overall, the chart highlights global inequalities in electricity consumption while also showing notable progress in specific regions over the 15 years.
